Giovanny Lino Tavares de Oliveira

Service Provider Analyst | DevOps, SRE & Infrastructure Automation
Santo André, São Paulo, Brazil | (+55) 11 97365-7078 | giovannylino9@gmail.com
linkedin.com/in/giovanny-lino | github.com/GiovannyLino

PROFESSIONAL SUMMARY

Service Provider Analyst at Logicalis and Computer Science student with hands-on experience in infrastructure automation, observability and support of mission-critical telecom carrier environments. Skilled in Linux, containers (Docker and Podman), Infrastructure as Code (Ansible and Terraform), CI/CD pipelines, AWS cloud services and end-to-end monitoring with Splunk and ThousandEyes.

Solid software development background (Python, Node.js, JavaScript/TypeScript, SQL) applied to building automation, REST API integrations and internal operations tooling. Career goal: to work as a DevOps/SRE Engineer focused on automation, reliability, continuous delivery and Infrastructure as Code culture.

PROFESSIONAL EXPERIENCE

Service Provider Analyst | Logicalis
Santo André, Brazil | Sep 2026 – Present

- Support and operation of Service Provider customer environments (telecom carriers), accountable for availability, performance and SLA compliance.
- End-to-end monitoring and observability with Splunk and ThousandEyes: dashboards, alerting, event correlation and root cause analysis (RCA).
- Automation of operational and provisioning tasks with Ansible and Python scripting, applying Infrastructure as Code and configuration standardization.
- Level 2 and 3 incident troubleshooting, incident, problem and change management following ITIL best practices, including post-mortems and action plans.
- System and platform integration through REST APIs, Python scripting and operational data processing routines.
- Use of containers (Docker and Podman) to package and run internal automation and data collection tooling.
- Technical documentation, runbooks and standard operating procedures for the operations team.

Telecom Engineering Intern | Logicalis
Santo André, Brazil | Dec 2025 – Aug 2026

- Developed network automation with Ansible (playbooks, roles, dynamic inventory and Jinja2 templates) for switch and router configuration.
- Built a network automation pipeline integrating NetBox as source of truth with Ansible, including bidirectional synchronization, dynamic inventory and monitoring provisioning through REST APIs.
- Created dashboards, searches and alerts in Splunk and ThousandEyes for observability of distributed telecom customer services.
- Deployed virtualized labs (PNETLab and Containerlab) to validate automation before applying it in production.
- Migrated a corporate dashboard to AWS Aurora PostgreSQL with secure access over a WireGuard VPN and a data access layer that replaced manual Excel-based processes.
- Fixed a data ingestion pipeline (Power Query/Power BI) that silently dropped Splunk records due to ISO 8601 timestamp parsing failures, restoring report integrity.
- Supported APIs, relational databases and virtualized test and staging environments.

KEY PROJECTS

PoC-in-a-Box – Environment Provisioning Automation
Internal platform that automates the creation of Proof of Concept environments, reducing manual setup time. Topology orchestration with Containerlab, provisioning with Ansible, asynchronous job execution with BullMQ and rootless Podman containers.

Tech stack: Containerlab, Ansible, Podman (rootless), BullMQ, Node.js, Linux.

Network Automation Pipeline with NetBox and Ansible
Network automation pipeline using NetBox as source of truth, Ansible dynamic inventory and automatic device provisioning in the monitoring platform via REST API (uri module), eliminating manual registration.

Tech stack: NetBox, Ansible, REST APIs, YAML, Jinja2, Python.

Network Virtualization and Automation Lab

Virtualized lab for developing and testing automation, with Ansible playbooks applied to virtualized switches and routers, consolidating Infrastructure as Code practices in network environments.

Tech stack: Ansible, PNETLab, Containerlab, Linux, IaC.

Corporate Dashboard Migration to AWS Aurora PostgreSQL
Migration of an operational database to AWS Aurora PostgreSQL, with WireGuard VPN connectivity, a data access layer, a database explorer UI and continuous deployment integrated with GitHub.

Tech stack: AWS Aurora PostgreSQL, WireGuard, Node.js, React, Vercel, CI/CD.

Uplink / TelcoForge – Pre-Sales Workspace Platform
Web platform for knowledge management, lab scheduling and discovery notes, with authentication, row level security (RLS) policies and continuous deployment.

Tech stack: React 19, Vite, TypeScript, Tailwind CSS, Supabase (PostgreSQL), Vercel.

TECHNICAL SKILLS

Cloud Computing: AWS (EC2, S3, IAM, VPC, RDS/Aurora), GCP, Vercel, Netlify, cloud architecture, high availability.

Containers & Orchestration: Docker, Podman (rootless), Kubernetes, Containerlab, virtualization.

Infrastructure as Code & Automation: Ansible (playbooks, roles, dynamic inventory), Terraform, NetBox, Jinja2, YAML.

CI/CD & Version Control: Git, GitHub, GitHub Actions, continuous integration and delivery, GitOps, deployment automation.

Observability & Monitoring: Splunk, ThousandEyes, Metabase, Power BI, dashboards, alerting, root cause analysis (RCA), AIOps.

Operating Systems & Networking: Linux (Ubuntu, RHEL), Shell/Bash, TCP/IP, DNS, routing and switching, VPN (WireGuard), Cisco equipment.

Programming & Scripting: Python, Bash, JavaScript, TypeScript, Node.js, SQL, PL/SQL.

Databases: PostgreSQL (AWS Aurora, Supabase), MySQL, Oracle, data modeling, NoSQL.

Methodologies & Practices: DevOps, SRE, Infrastructure as Code, ITIL, Scrum/Agile, REST APIs, microservices, technical documentation and runbooks.

EDUCATION

Bachelor of Computer Science – Universidade de São Caetano do Sul (USCS), Brazil | 2024 – 2028

Technical Degree in Mechatronics – SENAI Armando de Arruda Pereira, São Caetano do Sul, Brazil | 2019 – 2021

CERTIFICATIONS

- Iquall NetOps Automation Specialist (INAS) – Iquall Networks (2026)
- Iquall Network Automation Associate (INAA) – Iquall Networks (2026)
- AWS Academy Graduate – Cloud Foundations – Amazon Web Services (2026)
- Black Belt AIOps – Cisco (2026)
